## What is angular momentum?

Angular momentum is a measure of how much an object is rotating. It is calculated by multiplying the object's mass by its velocity and by the distance from the axis of rotation.

Angular momentum is a conserved quantity, which means that it cannot be created or destroyed. However, it can be transferred from one object to another.

## **The dreidel**

A dreidel is a four-sided spinning top that is used to play a game during Hanukkah. The dreidel has four Hebrew letters on its sides: nun, gimel, hey, and shin. These letters stand for the Hebrew words "nes gadol hayah sham," which means "a great miracle happened there."

When you spin a dreidel, it will eventually come to a stop. The letter that is facing up when the dreidel stops is the letter that determines what the player gets.

The dreidel is a fun and exciting game to play, and it's also a great way to learn about angular momentum.
